

The default location for PSADT logging is C:\Windows\Logs\Software. This location, along with the specific log file name (e.g., PSAppDeployToolkit_4.0.6_EN_01_PSAppDeployToolkit_Install.log), is configurable in the Config\Config.psd1 file. The LogPath property in Config.psd1 determines where the toolkit logs are saved. [1, 2]

Detailed Explanation:

- **Default Log Path:** By default, PSADT logs are written to C:\Windows\Logs\Software.
- **Customizing Log Path:** You can specify an alternate log path by modifying the LogPath property within the Config.psd1 file.
- **Log File Name:** The log file name is usually a combination of the application name, the PSADT version, and the action (install or uninstall), with the _PSAppDeployToolkit suffix.
- **Config.psd1:** This file contains the configuration settings for the PSAppDeployToolkit. It's where you'll find and modify the LogPath setting to customize the log file location.
- **Example:** If you set LogPath to C:\MyLogFolder, the PSADT logs will be saved in that directory. [1, 1, 2, 2]
